

Keeping a watchful eye on your business

CCTV/Video Surveillance Systems

CCTV or Closed Circuit Television refers to a visible or covert video system where the picture is viewed and recorded but not broadcasted. It was initially developed for banks and casinos; however today, due to its effectiveness at reducing crime and cost-lowering technology improvements, it is used in thousands of applications from personal residences to airports. Security Innovations is a full service provider of CCTV/Video Surveillance equipment with system design capability, installation, system monitoring and reporting. Digital video recording is the cornerstone of an effective overall security design. Digital video information can be recorded, viewed and controlled from almost anywhere, anytime. Security Innovations utilizes a full line of products and services to design an effective CCTV/Video Surveillance system to meet your unique needs and budget. Our full line

of high quality security cameras, digital recorders, monitors, control systems, remote viewing options and network video solutions provides virtually limitless possibilities for system designs large and small.

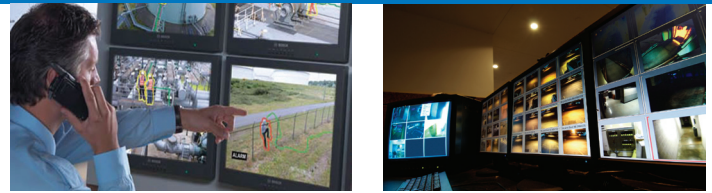

Advantages of Video Surveillance include:

- CCTV is considered to be an effective method to reduce crime
- Recorded events may be used to convict perpetrators
- Helps in the prevention of employee theft
- Allows business managers to check in while off premise
- Builds efficiency in the work place
- Creating a safe feeling environment for customers and employees
- Protects valuable inventory and records

"I saved thousands of dollars! After installing cameras and access control on my premises, I was able to reduce staffing of my security personnel to zero. This allowed me to save not only in salaries, but also in full time employee benefit costs. The virtual guard tours are better than being on site, because you can see various areas at one time. The service and equipment is technologically advanced and cutting edge...thanks for helping to streamline my security in a quick and efficient manner."

—Greg Trahan, Safety Management Systems

Commercial Financing Available – Security Innovations is committed to providing the most advanced security systems to your business at affordable prices. Please ask us about our commercial financing options.

What is Monitored Video Surveillance?

You've made a significant investment in video surveillance, why not use it to help PREVENT crime before it occurs?

Security Innovations provides a unique and superior security service that monitors your video surveillance system to prevent theft and damage BEFORE it happens. Traditional video surveillance systems will record everything that happens in a given area so that you can review the video AFTER an incident to identify who is responsible and help prevent further occurrences. *With Monitored Video Surveillance, trained professionals monitor your video cameras at any time, day or night.* Within seconds of any event, they are viewing your video camera recording of the incident and live camera images in progress. The professional station can then warn any intruders via speakers or two-way communications to depart the restricted area, immediately dispatch the appropriate authorities or identify the event as a false alarm caused by an animal, wind, etc. While this is happening, the professional monitoring station is reviewing all of the cameras on your premises, documenting and recording findings/communications to provide a detailed incident report to you and to the authorities so that any intruders can be apprehended before they get away.

Advantages of Monitored Video Surveillance include:

- Real time, interactive monitoring—day or night
- Saves money over security guards; covers more area
- Immediate warning to intruders via speakers and/or two-way communication
- Send instant alerts and video clips via e-mail to any device
- Secure internet access for client from anywhere, including PDA and WAP devices
- Professional inspection of property through video system during any event to look for additional activity and detail
- Virtual "guard tours"
- Provides all the benefits of traditional video surveillance recording plus real-time response and prevention
- Works with most existing equipment
