

Real-Time, Remote Video Surveillance Monitoring

Are You Getting The Most From Your Video Surveillance System?

Every bank requires an extensive security matrix in order to protect its employees, assets and customers. Unfortunately, even the most expensive security systems sometimes fail to dissuade criminals from attempting an armed robbery. Is your Bank's security system able to assist police on the scene during this type of event?

Security Innovations protects your bank not just before and after, but DURING a crime. With our technologically advanced monitoring center, Security Innovations provides responding authorities with real-time information of a crime in progress. Our security analysts are trained in communicating with the law enforcement to give them an inside edge to ensure any bank robbery is resolved with minimal casualty and loss. Law enforcement no longer has to rely on limited intelligence and external-only observations when dealing with armed robbery situations.

About Us:

Security Innovations provides advance video monitoring solutions to protect business, residences and the people who live and work in them. We provide a real-time, interactive monitoring solution that can easily integrate with any existing or new video surveillance network. Our systems are run on an advanced software platform, delivering a single point of alarm management and control for video surveillance, burglar and access control. A secure access portal via our website allows customers to manage and monitor their accounts and view activity reports online from any remote location, on any internet connected device.

BANKS
