

# School Security...Keeping Our Children Safe

## Real-Time, Remote Video Surveillance and Access Control Monitoring

School violence is not a simple issue with a single solution. A balanced approach, incorporating well-integrated programs that make sense are effective, is needed to address life-threatening situations on school campuses. An integral part of such a balanced approach is a secure access control system to the facility and a high-level video surveillance network. However, security cameras, when and if they are in the right position to record events, cannot stop an actual crime, unless they include one critical element—real-time, interactive remote video and access control monitoring.

Most schools already have some sort of access control and video surveillance network in place. It is important that school administrators understand the solutions available to them to make their security investments as efficient as possible. When a critical event occurs, real-time, remote monitoring can help to proactively prevent an incident or actively assist police and other first responders on the scene.

Security Innovations helps protect schools not just before and after, but DURING a crime. With our state-of-the-art security center, Security Innovations can proactively identify threats, secure external and internal access points to the facility and provide first responders with real-time information of a crime in progress. Our operators are trained in communicating with police and medical personnel to give them an inside edge to ensure any event is resolved with minimal casualty and loss. First responders no longer have to rely on limited intelligence and external-only observations when dealing with critical situations.

**SCHOOLS**

### Key Features/Benefits:

- Helps Prevent Intrusions
- Protect Students/Faculty/Staff
- Assist Responding Authorities Without Risk
- Helps Apprehend Suspects
- Protect Property from Theft and Vandalism
- Gain Peace of Mind With a Protected Learning Center

## About Us:

Security Innovations provides advance video monitoring solutions to protect business, residences and the people who live and work in them. We provide a real-time, interactive monitoring solution that can easily integrate with any existing or new video surveillance network. Our systems are run on an advanced software platform, delivering a single point of alarm management and control for video surveillance, burglar and access control. A secure access portal via our website allows customers to manage and monitor their accounts and view activity reports online from any remote location, on any internet connected device.

## Key Features/ Benefits:

- Real-time alarm notification and live interactive monitoring
- Perimeter protection: identify threats before they enter the facility
- 2-way audio capability (listen and speak) to gather information/evidence and/or deter perpetrators
- Send instant alerts and video/audio clips to responding authorities
- Instant access control capability (ideal for lockdown situations)
- System can easily integrate with any video technology on the market
- Secure, remote access from any location, using any device
- View live cameras or previous events via the internet
- Easy-to-use interface with online reports, event history and remote storage
- Virtual guard tours to augment or eliminate security guard costs
